Important information: This publication has been prepared by Fundamental Data Limited on behalf of AIC Information Services Limited for information purposes only. It is not an invitation or inducement to engage in investment activity nor does it purport to contain information on which to base investment decisions. Whilst Fundamental Data Limited have taken all reasonable steps to verify the statistics in this publication, neither AIC Information Services Limited nor Fundamental Data Limited accept responsibility for any errors or omissions in this publication or for any loss of any nature incurred by any person using this publication, howsoever caused. Investments in investment companies carry various degrees of risk. AIM is a market designed primarily for emerging or smaller companies to which a higher investment risk tends to be attached than to larger or more established companies. AIM securities are not admitted to the Official List of the United Kingdom Listing Authority. The rules of AIM are less demanding than those of the Official List. VCT's are complex investment products and are only suitable for sophisticated investors. Where a company uses or proposes to use gearing as part of its investment strategy, investors should be aware that the securities may be subject to sudden and large falls in value and you could get back nothing at all. For more information on VCT's, AIM companies and other investment companies please visit the AIC website www.theaic.co.uk. Private investors are advised to take independent financial advice before making any investment.

The Association of Investment Companies (AIC) is a company limited by guarantee whose registered office is 9th floor, 24 Chiswell Street, London EC1Y 4YY. Its trading and registered office address are identical. The AIC is a company registered in England and Wales and its company registration no. is 4818187. The AIC is registered for VAT and its registration no. is 396992669.

AIC Sector Averages

The figures below show averages for all Conventional AIC Member companies. The total return figures show the change in value to the investor of a theoretical £100 over various periods, assuming any income was reinvested. Asset related averages consist only of data submitted by AIC Members as at the current month end.

TOTAL ASSETS (Sum £m)	GEARING	DISC/ PREM	SECTOR AVERAGES	SHARE PRICE				TOTAL RETURN SIZE-WEIGHTED AVERAGE				NAV TOTAL RETURN SIZE-WEIGHTED AVERAGE				5YR DIV		DIV YIELD %

VENTURE CAPITAL TRUSTS

VCTs were introduced by the 1995 Finance Act to help provide finance for small UK businesses, this includes unquoted and AIM/OFEX listed companies. Investors benefit from various tax reliefs if the company adheres to the specific VCT rules.

Split Capitals

Split Capitals are investment companies which have more than one type of share, each of which carries different entitlements to participate in income and capital returns. At least one class of share of a split is likely to have a limited life with a fixed winding up date. Conventional shares which have similar characteristics to ordinary income shares are classified as Highly Geared Ordinary and are included in the Split Capitals section. Depending on the value of the Total Assets of the company, any shares in the split structure may be exposed, or nearly exposed, to gearing and/or expenses.

Split Capital Share Classes

ZERO DIVIDEND PREFERENCE SHARES

A zero dividend preference share is designed to deliver a predetermined rate of capital growth. Although the value may be predetermined, this is not a guaranteed return. The entitlements of the zero dividend preference share are after any loan stock or prior ranking preference share. For more Terminal Asset Value (TAV) and redemption yield data please visit www.aicstats.co.uk

- The current price for this share is not available as it does not trade regularly. The price and price related data is based on the latest available information.
- Income share receives 25% of the surplus assets on liquidation.
- With agreement from the company, the price for this share has been set to NAV because the share does not trade regularly. All price related data items are calculated on this basis.

CAPITAL SHARES

The capital share is the share that is entitled (unless otherwise stated) to all the surplus assets on wind-up after repayment of any prior ranking charges. For more Terminal Asset Value (TAV) and redemption yield data please visit www.aicstats.co.uk

- The Capital share is entitled to 48.99% of the surplus assets on liquidation.

ORDINARY INCOME SHARES

An ordinary income share is a share designed to give shareholders a highly geared return both in terms of income and capital. Not all ordinary income shares have a fixed wind-up date, these are listed separately. These undated shares tend to have a 'normal' split structure but only the prior ranking shares and debt are dated. For more analytics on Terminal Asset Value (TAV) and redemption yield data please see www.aicstats.co.uk

Data are dated: 7 or more analyses on Premium/Asset Value (14%) and redemption yield data please see www.aedstates.co.uk													Dated Shares			Share Price Total Return on £100			TAV 0 %			Equity Redemption Yield (%p.a.)					Equity Hurdle Rate % p.a.

AIC Stats Explanatory Notes

The data contained in the AIC Stats is partly based on information supplied by AIC Member companies published initially through the Monthly Information Release (MIR). The MIR is available to download at www.theaic.co.uk. Share price information, dividends and the underlying information used to calculate the splits analytics is based on a combination of information provided by AIC Member companies and sourced by Fundamental Data. If you require a more comprehensive explanation please contact the AIC at the address given on the back cover.

Transaction Costs and Important Notes: The costs of buying and selling investment company shares will depend on the amount invested and the market-maker's spread, which can vary according to the liquidity of the company's shares. Other costs include stamp duty of 0.5% on every purchase, in addition to commission charged by stockbrokers or an IFA, if used, or the costs of buying and selling through a management group retail product such as a Savings and Investment Scheme or ISA, if used. Because of these variables it is difficult to state any meaningful "average" transaction cost for investment company shares. AIC share price performance figures are therefore calculated on a mid-market to mid-market basis, making no allowances for transaction costs. The reader must take note of this when making comparisons with the performance of other collective investments. The term total return is used to indicate the return of capital and income, with income reinvested. Averages do not include those figures which are non-calculable or blank. Note that the potential for asset growth/decline of the company as a whole is affected by the type of assets held. For Split Capitals changes in the composition of the underlying portfolio such as % holdings in equity and non-equity will affect the value of the equity only analytics. All data is close of business on the last working day of the month unless other wise stated.

AIC Sector and Split Capital Averages

The performance comparison pages display the total and average values for all sectors as displayed in the AIC Sector and Split Capital section.

1. Total Assets: the sum of assets within each sector

2. Gearing and Discount: the weighted averages for all sectors, size weighted by current shareholder funds and the market capital respectively.

3. Share Price Total Return: the average weighted performance figures illustrate the theoretical average share price return on £100 assuming any net income was reinvested, size weighted by the starting market capital of each company – see note 2 and 7.

4. NAV Total Return: the average weighted performance figures illustrate the theoretical average NAV return on £100 assuming any net income received was reinvested, size weighted by the starting shareholder funds of each company - see note 8.

5. Five Year Dividend Growth and Dividend Yield %: the weighted average for all sectors, size weighted by the current market capital of each company.

Index of AIC Member Investment Companies

A list of all AIC Members with key information and details. If indicated the company is included in the management group wrapper schemes, scheme details are listed in separate sections of the publication. Please note full terms and conditions and charges of the schemes must be obtained directly from the company.

- **Winding-up Option:** relates to the ability of shareholders to vote, on a given date, on whether the company should be wound up or in some cases continued. Further information should be obtained from the company concerned.

- **Non Section 842:** indicates a company not approved under S842 or S842AA. Whilst companies approved under Section 842 of the Income and Corporation Taxes Act 1988 are exempt from tax on the capital gains realised within their funds, readers should check the tax situation of offshore companies and also the possible tax implications that affect offshore shares held in an ISA/PEP by contacting the companies concerned. Section 842AA refers to companies which are approved Venture Capital Trusts (VCT)

- **Domicile:** the country in which the Company is incorporated. UK is the United Kingdom, GUE is Guernsey, NET is the Netherlands and LUX is Luxembourg.

- **Exchange:** indicates the exchange on which the shares trade. AIM is used for shares which trade on the Alternative Investment Market. MAIN is used for shares which trade on the Official Main Market Exchange. NZ indicates the company trades on the New Zealand Exchange, CI the Channel Islands Exchange and ISE the Irish Stock Exchange. Where a company is traded on more than one exchange, both will be shown. E.g.: MAIN/NZ.

- **Trading Platforms:** The market is supported by three main trading platforms namely SETS, SETSmm and SEAQ. Securities traded on SETS include the

FTSE 100 and the most liquid FTSE 250 securities, Securities traded on SETSmm includes FTSE Small Cap securities and FTSE UK AIM50 index constituents. SEAQ is a service for less liquid securities and most AIM securities. ITBB, the International Bulletin Board, is a bulletin board for trading international securities with a secondary listing on the London Stock Exchange.

Symbols: (\$) the shares are dollar denominated (figures are sterling adjusted within this publication). (C) the company has convertibles in issue, this may affect the level of gearing - see gearing. (D) the company is geared, or partly geared, by a debenture. (F) the company's main policy is a fund of funds policy. (I) the company is 'self managed' (or the manager – company relationship is symbiotic). (M) the company has a stated investment policy not to limit investments in other investment companies to a minimum of 15% of total assets (or no announcement to the contrary). VCTs are not included in this analysis and therefore will not have the M symbol. (N) the company is geared, or partly geared, by an index-linked prior charge. (O) the company has management options in issue (P) the company is geared, or partly geared, by a preference share. (R) the dividends have been reduced within the current financial year. (S) the dividends have been suspended. (T) the company has shares held in treasury. Treasury shares are valued at mid-market price unless there is a restriction in place which prevents the shares being issued at a value below NAV and the shares are currently trading at below NAV. Valuing shares in treasury on a mid price basis may differ from the re-issuance policies of individual companies. (w) the company has warrants in issue (x) the company does not qualify for an ISA or PEP. (*) the Portfolio Spread figures are one month in arrears. (>) the fair value NAV (published NAV) is greater than the par value NAV (performance NAV) by 3% or more. (<) the fair value NAV (published NAV) is smaller than the par value NAV (performance NAV) by 3% or more.

AIC Sectors

Companies are classified within sectors broadly based upon their investment policies. The ordinary income shares and capital shares of Split Capitals are included in the relevant AIC sector (see Split Capitals)

1. Total Assets: the total value of all assets held, less current liabilities (short term loans used for investment purposes are not deducted), before deducting prior charges, including listed investments at their fair value price and unlisted investments at directors' valuation. Revenue items for the current financial year have been excluded. Revenue taken to reserves for the prior financial year is included in the total assets

2. Price (pence): High/Low: the highest and lowest closing mid-market share price recorded over the previous twelve months (or less if the share has not been trading for 12 months). **Bid/Sell** is the price offered in the market to buy shares from an investor, also referred to as the selling price. **Offer/Buy** is the price offered in the market at which shares are offered to investors also referred to as the buying price. The mid-market price which is the average of the two figures is used to calculate the discount, yield, analytics and the share price performance data. Some investment companies securities trade on SETs (see Index of AIC Members). Securities which trade on SETs have one official closing price; this price is used to calculate the price related data in the MIS. The bid and offer prices for these securities are the best bid and best offer prices in the service at close which is approx. 16h30.

3. NAV per share (Net Asset Value): There is no statutory requirement for a company to release a calculated NAV per share. NAVs are supplied voluntarily to the AIC according to AIC provided guidelines. These guidelines may, in some instances, differ from the NAVs released to the market and those in the individual company accounts. The NAV is shareholder funds expressed as an amount per ordinary share. Shareholder funds are the net value of all the company's assets, at fair value, having deducted all prior charges at their fair value. If fair value NAVs have not been provided to the AIC no NAV or discount will be published. Convertibles are converted and Warrants exercised, if dilution would occur (i.e. when the NAV per share is greater than the warrant exercise price). Treasury shares please see Symbols/Notations (T). Revenue items for the current financial year are excluded

unless the company has indicated that the income account is run on a permanent deficit basis. See: Transaction Costs and Important Notes.

4. Discount (-)/Premium %: the difference between the mid-market share price and the NAV per share expressed as a percentage of the NAV per share. Where the share price is higher than the NAV per share, the share stands at a premium and this will be displayed as a positive value. There are 3 columns. **Current:** calculated for the current month end; **Average:** based on the previous 12 months. If the discount has been in calculable within the previous 12 months, the average will not be calculated; **High/low figure:** the highest and lowest figure over the previous 12 months. These figures consist of month end data only. If the company launched less than 12 months ago the figures shown will represent the shorter period. If the discount has been in calculable within the previous 12 months, the low figure will be represented by a dash. Decimal data from 0.5 is rounded down.

5. Gearing: Gearing indicates the company has one or more borrowings and/or prior ranking classes of shares. These are known as "prior charges" because they rank before the shares in their entitlement to capital and/or income. Gearing illustrates the effect that the current prior charges may have on the value of the shareholder funds if the total assets were to rise or fall. A figure of 115 means that the shareholder funds are 15% geared and indicates the extra amount by which the shareholder funds would rise or fall if the total assets were to rise or fall. A figure of 100 means there is no gearing. A figure under Cash & Fixed Interest indicates that the company is not fully invested in equities and other securities and therefore the actual gearing could be less than the figure shown. Future capital entitlements of any prior ranking charges are not considered. Certain prior charges are "index-linked" This means that their value is determined at any time by the performance of a particular index such as the FTSE All-Share Index. The gearing works in a similar way as described above, except that the value of the prior charges, rather than being fixed, will fluctuate in line with the index to which they are linked, although if the portfolio moves in line with the index then there is effectively no gearing. It is only if the portfolio outperforms the index that there is positive gearing, if it underperforms the index then the effective gearing is negative. The symbol ++ indicates that the gearing cannot be calculated. The higher the gearing, the greater the potential risk and reward. If the company has convertibles is issue this will affect the level of gearing depending of whether the convertibles are 'in the money' or not.

6. Portfolio Spread %: the percentage of total assets (held as specified in the column headings. Fixed interest (bonds) excludes convertibles and unlisted fixed interest securities held as part of a package of investments.

7. Share Price Total Return: the theoretical return to the investor from £100 invested at the beginning of each period specified, on a mid-market to mid-market basis, assuming that all dividends received were reinvested in the shares of the company on the last day of the month the shares were quoted ex-dividend.

8. NAV Total Return: the theoretical total return on shareholders funds per share, reflecting the change in value of the NAV per share assuming dividends paid to shareholders were reinvested in the NAV on the last trading day of the month the shares were quoted ex-dividend. It is assumed that the managers started with £100 at the beginning of each period. The NAV basis is as in note 3 except prior charges are deducted at their par value (or final redemption value). Performance figures are not calculable for shares which have 0 values.

9. Five Year Div Growth %p.a.: dividend growth over the past five years annualised to give a compound percentage rate per year. This excludes special dividend payments.

10. Dividend Yield %: annual dividends as currently declared or forecast by the directors of the investment company, as a percentage of the current market price. Special dividend payments are excluded.

Split Capitals (See Transaction Costs and Important Notes)

1. Total Assets (£m): see note 1, AIC Sector.

2. Debt (£m): Unless otherwise indicated, the total redemption value of all prior charges ranking before the equity capital. This does not include the share entitlements. Debt is not adjusted to reflect available total assets.

3. Debt Cover: Total Assets divided by Debt. See notes 1 & 2

4. Cash / Cash Equivalent and Portfolio Spread %: see note 6, AIC Sector.

5. Class of Share: the name given to the share by the individual companies, listed in order of priority of capital repayment upon wind up

6. AIC Classification: the share type classification. See 5 above.

7. Assets per Share (£m): The current total value of assets attributable to the share class. The assets per share plus the debt equal the total assets (unless otherwise indicated). Revenue items for the current financial year have been excluded.

8. Number of Shares/amount of stock: the number of shares in issue at the date specified.

9. Winding-up date: details of the date(s) on which the share redeems or the company proposes shareholders will vote whether to wind-up the company.

10. Shareholder Funds Total Return: the theoretical total return on £100 invested in the NAV of each class of share and assuming that any net dividends paid to shareholders were reinvested in the relevant underlying NAV on the day the shares were quoted ex-dividend.

11. Portfolio Yield: the expected revenue, over the next twelve months from the specified month end as a percentage of the total assets at the specified month end.

12. Company Objective: A short description of the companies objective.

Zero Dividend Preference Shares (ZDPs)

1. Market Capitalisation: current share price multiplied by the number of shares

2. Share Price: see note 2, AIC Sector.

3. NAV Per Share: the NAV that applies to the share.

4. Current Entitlement: the predetermined entitlement attributable to the share at the specific month end. When there are sufficient assets to provide 'current entitlement' slight differences in the figures published between the current entitlement and the NAV, supplied by members, may be due to rounding or slight variances in the number of days used in the entitlement methodology. In some cases shares ranking after the ZDPs in terms of capital are entitled to revenue reserves which are included in the Total Assets figure. This may result in the NAV shown for the ZDP being lower than the current entitlement and shares ranking after the ZDP having a positive capital value.

5. Years/Months to wind-up: the number of years & months until the share is due to wind up wound-up, e.g. 9-4 means 9 years & 4 months.

6. Redemption Price: the predetermined capital entitlement per share at wind-up. (Although the value may be predetermined, this is not a guaranteed value).

7. Share Price Total Return: see note 7, AIC Sector

8: TAV 0% Per Share (Pence): the **estimated** Terminal Asset Value (TAV) of the share in pence at the end of the life of the share based on the assumption that the total assets of the company, adjusted for future capital charges (see 11) do not grow. The calculation of the TAV includes the assumption that any undistributed revenue reserves are not paid out until the end of the life. Therefore the TAV may include any revenue reserves and may be higher than the redemption price.

9. RY Red Price: the annual percentage return until wind-up on the current market price, to the predetermined redemption value of the share.

10. Equity Redemption Yield % p.a.: the return on the share, expressed as an annual percentage, assuming the share is bought at the current price, held until wind-up, and that the total assets of the company (adjusted for any future capital charges see 11) grow at the annual rates quoted. These redemption yields are based on growing the equity portion of the portfolio, holding cash and fixed interest holdings constant. Note that the potential for asset growth/decline is affected by the type of assets held. If there are insufficient assets to cover the stated redemption price entitlement the entitlement will be reduced to what can be paid at redemption. These figures can only offer benchmark indications of possible returns, as future growth rates cannot be known. No account is taken of Capital Gains Tax.

11. Asset Cover: 1) Share Cover: the ratio by which the shareholder's redemption value is currently covered by those assets of the company available at wind-up. Assets available at wind-up have been adjusted for prior charges (see note 5, AIC Sector) and any known future capital charges. Future capital charges include interest charges and management fees charged to the capital account over the remaining life of the share and a wind-up cost of 1% of the total assets. The use of a 1% wind-up cost is a notional amount and will vary from company to company.

2) Total Debt Cover: the ratio by which the shareholder's redemption value and prior charges and all future capital charges (see 11 above) are covered by the total assets (any prior charges that wind up before redemption are deducted from the assets).

12. Equity Hurdle Rates: 1) Share Price: indicates the required annual growth rate of the equity portion (cash, fixed interest and income share holdings are excluded) of the total assets if there are to be sufficient assets to offset all prior charges and future capital charges (see 11 above) and repay the shareholders the current share price. 2) Redemption Price: indicates the required annual growth rate of the equity portion of the total assets if there are to be sufficient assets to offset all prior charges and future capital charges (see 11 above) and repay the shareholders the predetermined redemption value. 3) Wipe-Out: indicates the required annual growth rate of the equity portion of the total assets if there are to be sufficient assets to offset all prior charges and future capital charges (see 11 above) and assuming the share has a zero terminal asset value.

13. Current PC % of TA: the current value of any prior ranking charges including prior ranking share types (excluding future capital charges see note 11) as a percentage of the total assets. This indicates the % of current total assets attributable to current prior charge values (if any).

Income Shares

1. Market Capitalisation: see note 1, ZDPs.

2. Share Price: see note 2, AIC Sector.

3. NAV Per Share: the NAV that applies to the share.

4. Dividend: the total dividend from the Company's latest financial year unless more recent information is available or a forecast has been made by the Directors.

5. Dividend Yield: see note 10, AIC Sector.

6. Years/Months to wind-up: see note 5, ZDPs.

7. Redemption Price: see note 6, ZDPs.

8. Share Price Total Return: see note 7, AIC Sector

9. Equity Redemption Yield: the total return on the share, expressed as an annual percentage, assuming the share is bought at the current price, held until wind-up, and that the total assets of the company (adjusted for any future capital charges see 11) and the expected dividend stream payable grow at the annual rates quoted. These redemption yields are based on growing the equity portion of the portfolio, holding cash and fixed interest holdings constant. These figures can only offer benchmark indications of possible returns, as future growth rates cannot be known. No account is taken of Capital Gains Tax or Income Tax. The dividends used on these calculations are as defined note 10, AIC Sector although they may contain Fundamental Data estimates.

10. Three Year div growth: as per note 9, AIC Sector.

11. Asset Cover: see 11 ZDP

12. Hurdle Rate: see 12 ZDP

Capital Shares

1. Market Capitalisation: see note 1, ZDP.

2. Share Price: see note 2, AIC Sector.

3. NAV: the current NAV after deducting the current entitlements of all prior charges ranking before the capital share. This should not be taken as an indication of the NAV at redemption.

4. Discount (-)/Premium: see note 4, AIC Sector.

5. Gearing: see note 5 AIC Sector

6. Years/Months to Wind-up: see note 5, ZDP.

7. Share Price Total Return: see note 7, AIC Sector

8. Equity Redemption Yield: the total return on the share, expressed as an annual percentage, assuming the share is bought at the current price, held until wind-up, and that the total assets of the company (adjusted for any future capital

charges) grow at the annual rates quoted. These redemption yields are based on growing the equity portion of the portfolio, holding cash and fixed interest holdings constant. These figures can only offer benchmark indications of possible returns, as future growth rates cannot be known. No account is taken of Capital Gains Tax or Income Tax.

9. Equity Hurdle Rate: see 12 ZDP

Ordinary Income Shares

Dated Shares

1. Market Capitalisation: see note 1, ZDP

2. Share Price: see note 2, AIC Sector.

3. NAV: See note 3, Capital Shares. This should not be taken as an indication of the NAV at redemption.

4. Discount (-) /Premium: see note 4, AIC Sector.

5. Gearing: see note 5, AIC Sector

6. Dividend: see note 3, Income Shares.

7. Dividend Yield: see note 10, AIC Sector.

8. Years/Months to wind-up: see note 5, ZDP.

9. Share Price Total Return: see note 7, AIC Sector

10. Equity Redemption Yield: the total return on the share, expressed as an annual percentage, assuming the share is bought at the current price, held until wind-up, and that the total assets of the company (adjusted for any future capital charges) and the expected dividend stream payable grow at the annual rates quoted. These redemption yields are based on growing the equity portion of the portfolio, holding cash and fixed interest holdings constant. These figures can only offer benchmark indications of possible returns, as future growth rates cannot be known. No account is taken of Capital Gains Tax or Income Tax. The dividends used on these calculations are as defined note 10, AIC Sector although they may contain Fundamental Data estimates.

11. Three Year Dividend Growth: dividend over the past three years, annualised to give a compound percentage rate per year. This excludes special dividend payments.

12. Equity Hurdle Rate: see 12 ZDP

Undated Shares (all columns are defined as listed in the above Dated Shares except those listed below)

13. Years/Months to redemption of prior charges: the number of years and months left until the redemption of the prior charges as listed in the Split Capital Index .e.g. 9-4 means 9 years and 4 months.

14. Equity Internal Rate of Return: This is an undated share. See above note 10 and note 8 Income Shares

Warrants (analytics based on Fundamental Data models)

1. Number of Warrants in issue

2. Subscription Terms: details of the warrants exercise terms.

3. Warrant Price: mid-market price at close of business on the date specified.

4. Share Price: mid-market price of the share into which the warrant may be exercised, at close of business on the date specified.

5. Warrant Premium: the % by which the current warrant price, when added to the exercise price, exceeds the current share price into which the warrant can be exercised.

6. Warrant Gearing: share price divided by the warrant price.

7. Cheap/Dear shows the value of the current warrant price compared to the theoretical value, simply > 100 is dear > 100 is cheap. Ratio is from dividing the warrant price by the theoretical value and multiplying by the warrant model's Delta. Use caution in interpreting these values as they are affected by current market volatility.

8. Theoretical Value of the warrant based on the current share price. The model gives an estimate of the binomial model value and uses as input the exercise price, share price, historic volatility, interest rate, share dividends, warrant dividends and time to expiry

9. Historical Volatility: 3 month volatility of the underlying share price

10. Implied Volatility: volatility attributed to the underlying share by the market. The volatility level needs to be plugged into the model to make the model's theoretical value equal the current warrant price. In some cases this will be 0, which implies that no value of volatility will allow the model to come up with the current market price of the warrant.
